

BRD - BUSINESS REQUIREMENTS DOCUMENT

Project Name

UniClub

Project Description

UniClub is a web platform designed for university students that centralizes information about all student clubs and organizations in one place. The platform allows students to explore clubs, apply for membership, and track the status of their applications. Club presidents can review and manage student applications efficiently.

One of the key features of the project is the integration of Artificial Intelligence. The AI system analyzes students' interests and preferences and recommends the most suitable clubs based on their responses. This helps students discover organizations that align with their skills, hobbies, and academic interests.

Problem Statement

Many students are unaware of the clubs available at the university or struggle to find clubs that match their interests. Additionally, obtaining information about clubs and completing the application process can be time-consuming.

Project Objectives

- Centralize information about all university clubs on a single platform.
- Simplify the process of discovering and joining clubs.
- Automate application management.
- Provide personalized club recommendations.
- Help students find clubs that match their interests and goals.

Target Audience

- University Students
- Club Presidents and Leaders
- University Administration

Student Features

- Browse a list of university clubs.
- View detailed club information.
- Access announcements and updates.
- Submit club membership applications.
- Track application status:
 - Under Review
 - Accepted
 - Rejected
- Receive personalized AI-powered club recommendations.

Club President Features

- Review student applications.
- Accept or reject applications.
- Manage club information.
- Publish announcements and events.

Artificial Intelligence Features

- Analyze student interests through a questionnaire.
- Identify students' preferences and areas of interest.
- Recommend the most suitable university clubs based on students' responses.
- Provide personalized club suggestions.
- Help students discover clubs that align with their interests, skills, and goals.
- Improve club discovery and increase student engagement in extracurricular activities.

Functional Requirements

- Authentication using university email accounts (@alatoo.edu.kg).
- User management system.
- Club profile pages with detailed information.
- Application submission and management system.
- Application status tracking system.
- Announcement board.
- AI-powered club recommendation system.
- Responsive design for desktop and mobile devices.

Expected Outcomes

- Increased student participation in university clubs.
- Simplified club discovery and application process.
- Faster and more convenient access to club information.
- More personalized club recommendations for students.
- Improved student engagement in university life.

MVP (Minimum Viable Product)

- University email authentication.
- Club directory with detailed information.
- Student application system.
- Application status tracking.
- Club president dashboard for managing applications.
- AI-powered club recommendation feature.
- Demo data with selected university clubs.
