

UniClub

Problem :

- Students struggle to find clubs that match their interests.
- Club information is scattered and difficult to access.
- The application process is not centralized.

Idea :

- One platform for all university clubs.
- Easy club discovery and online applications.
- AI-powered club recommendations based on student interests.

SOLUTION

What We Built :

- Centralized platform for university clubs.
- Club profiles with detailed information.
- Online application system.
- Application status tracking.
- AI-powered club recommendation system.

Team Contributions

Project Manager :

- Project planning, Trello management & reporting , BRD, Project Lifecycle, README, presentation.

Frontend Developer :

- UI/UX design, responsive pages, navigation.

Backend Developer :

- Authentication, database integration, application management, api integration.

DevOps Engineer :

- GitHub, Docker, Railway deployment.

AI Engineer :

- AI recommendation system and interest analysis.

TECH STACK

Frontend :

- HTML
- CSS
- JavaScript

Backend :

- node.js

AI :

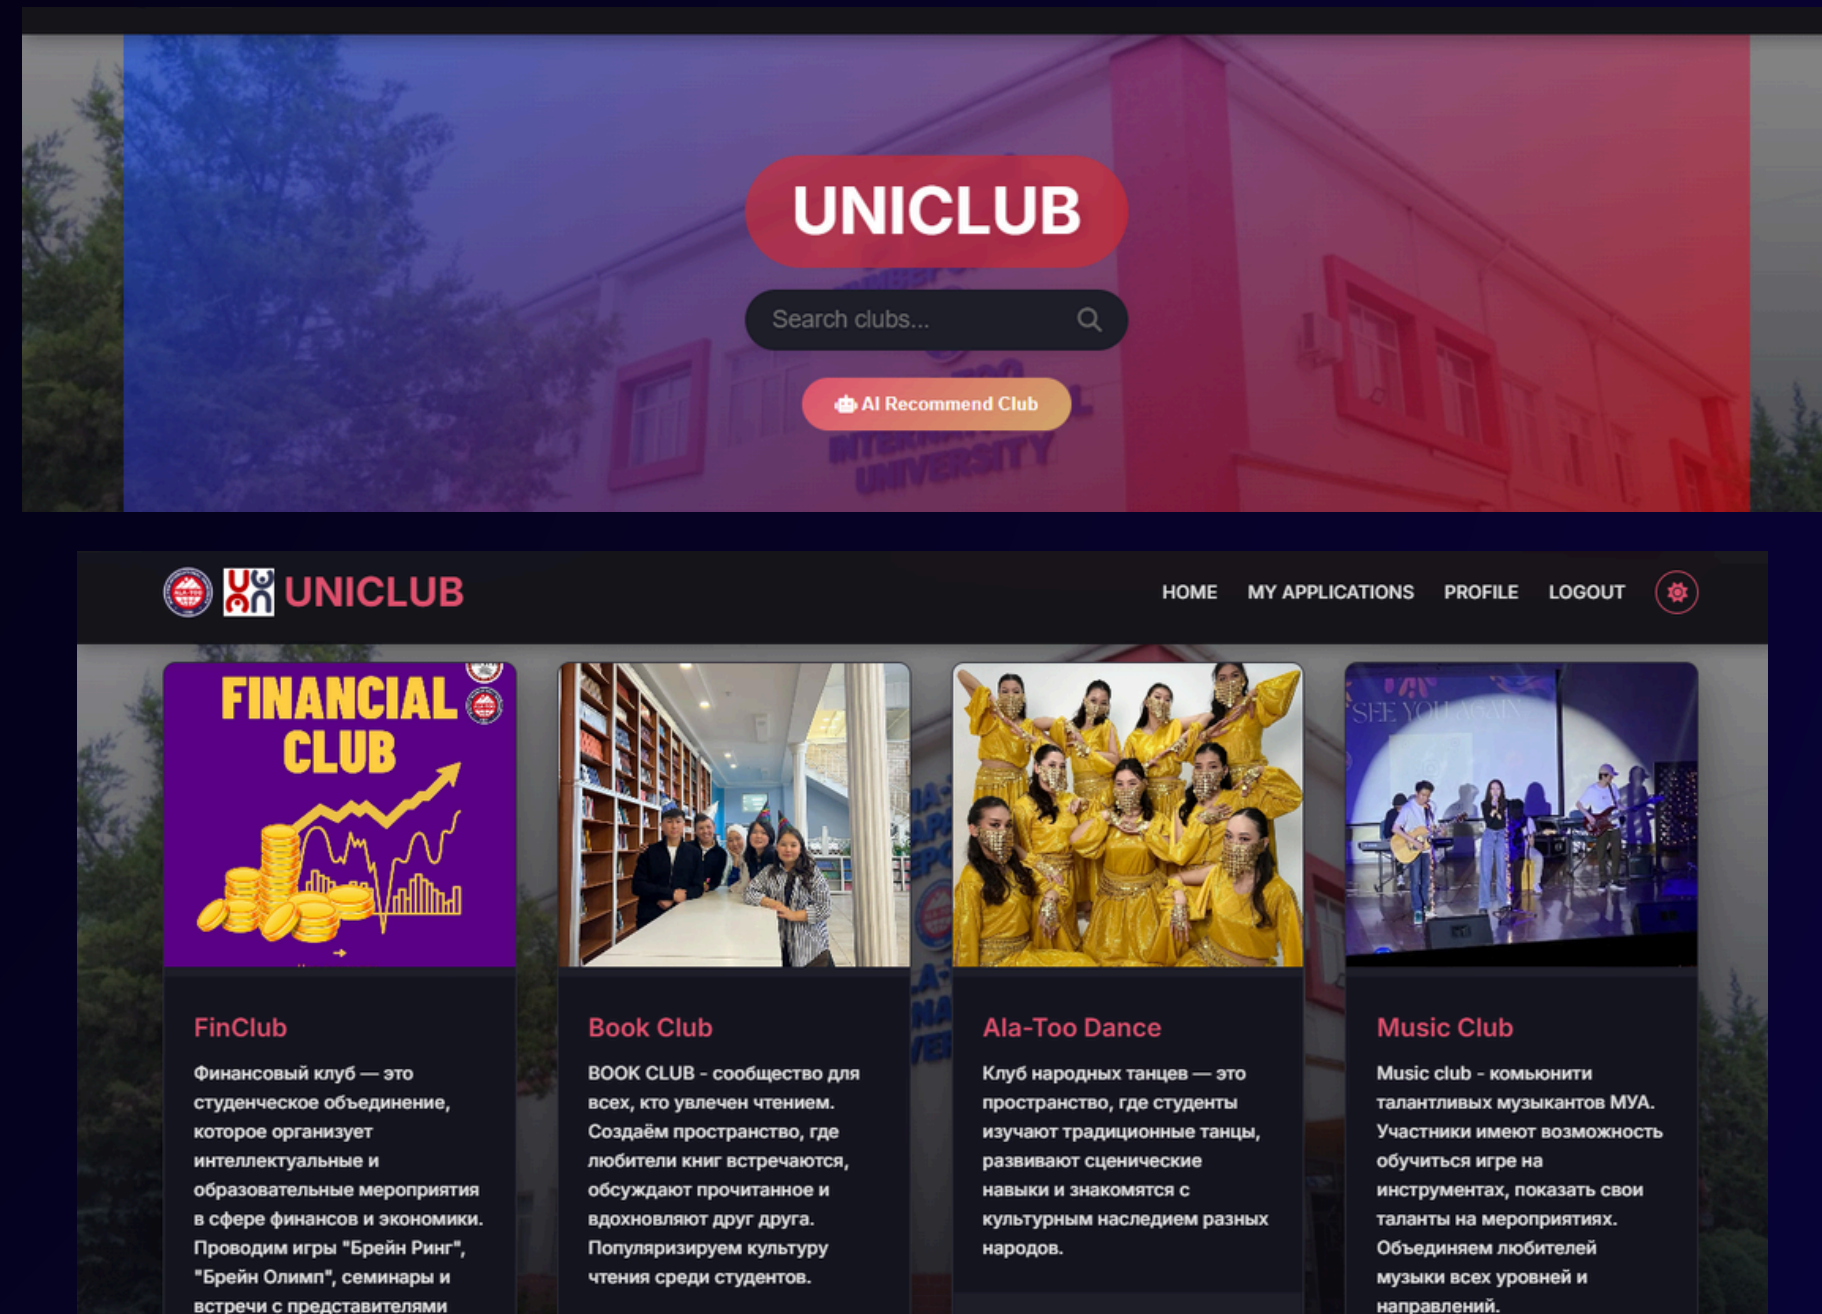

- Google AI Studio
- Groq

DevOps :

- GitHub
- Docker
- Railway

Project Manager :

- Trello
- BRD/Daily standups
- Project Lifecycle

AI CLUB RECOMMENDATION SYSTEM

How It Works :

1. Student completes a questionnaire.
2. AI analyzes interests and preferences.
3. AI recommends suitable clubs.

Benefits :

1. Personalized recommendations.
2. Faster club discovery.
3. Increased student engagement.

Next Steps :

- Add all university clubs.
- Improve AI recommendation accuracy.
- Add notifications and event updates.
- Deploy the platform for university-wide use.

• Integrate an AI chatbot that can answer club-related questions, such as:

- club location;
- contact information;
- membership requirements;
- application procedures;
- meeting schedules and events.

Results :

- ✓ Club directory
- ✓ Club information pages
- ✓ Application system
- ✓ Application status tracking
- ✓ AI-powered recommendations
- ✓ Working prototype
